United Conveyor Corporation Successfully Commissions Two Dry Sorbent Injection Systems for Midwestern Utility

Waukegan, IL, July 1, 2016—United Conveyor Corporation (UCC), a global leader in abrasive material handling and air pollution control technology, announced today that two large Dry Sorbent Injection (DSI) Systems have been fully commissioned at a major Midwestern Utility to ensure SO₂ reduction requirements are met.

These innovative systems are designed to optimize sorbent use, while achieving stringent emissions regulations. The project scope included patented UCC COBRA™ Lances and VIPER® Mills, splitters with auto purge features, truck unloading systems with blowers, chillers and dehumidifiers, along with additional system upgrades. Computational Fluid Dynamic (CFD) modeling of the plant duct was also conducted to enhance sorbent distribution.

“UCC DSI systems represent the latest technology for SO₂, SO₃ and HCl removal”, said Jon Norman, Sales and Technology Manager of United Conveyor Corporation. “UCC continues to invest in air pollution control technologies that provide optimal, cost-effective results and most importantly, systems, products and service that our customers can rely on.”

Engineering and material supply was completed at the UCC headquarters in Waukegan, Illinois. The systems met all performance guarantees and are now fully operational.

About United Conveyor Corporation

Since 1920, UCC has been committed to the design, supply, construction, and maintenance of world class systems precisely engineered to better serve utility providers. UCC owns and operates a steel fabrication facility to maintain direct control over quality and timely delivery of manufactured components and replacement parts guaranteed to meet or exceed stringent customer performance requirements. The company offers a global network of sales and service representatives serving customers and installations spanning six continents.
